BIOMIMICRY

Tobogganing penguins (emperor, Adélie) give a few kicks, then glide far on their bellies. Copied: a 22 cm power stroke (the band), then a long freewheel belly-glide on a keel; low, long body.

HOW IT PLAYS

- Click the head UP, press on its back and pull back ~22 cm
 - Let go - the ratchet holds it.
 - Tap the head - it toboggans ~ 3.9 m across the floor.
 - Lift the head to re-arm
- vs Concept 2: lying body, band in tension (pull-back), head-nod trigger.

NUMBERS

- Mass ~ 39 g, 78 % printed PLA
- CG 17 mm ahead of rear axle, 15 mm up (68 % on drive wheels)
- Band stores 31 mJ; KE at end of stroke 24 mJ; 2.5 m needs 16 mJ
- Predicted run ~ 3.9 m, top speed ~ 1.1 m/s
- Grip needed $\mu \geq 0.72$ (nitrile O-ring ~ 0.9)
- Bought (15): 2 mm steel rod, 6x MR52, 4 O-rings, #10 band, line, 5 g ballast. Printed: 17 parts

RULES CHECK

- ✓ ≥ 75 % printed PLA (78 %)
- ✓ Parts fit the egg (box C); built toy is bigger than the egg
- ✓ Stores energy and waits until the head is tapped
- ✓ Trigger is not a removable pin - nothing comes off
- ✓ No energy stored when apart (band relaxed)
- ✓ Snap / press fits - no glue, no tools needed
- ✓ No bought toy parts or downloaded CAD

A ENERGY - PULL-BACK CHARGE

B TRIGGER - TAP THE HEAD

C PACKS INTO THE EGG
